

Riya Singh, phone 555-2107, email [riya.singh@email.com](mailto:riya.singh@email.com). I worked at MLSystems from 2021 to 2025 as a Machine Learning Engineer where I developed machine learning models and production pipelines for business applications. I used Python, Scikit-learn, PyTorch, Pandas, NumPy, MLflow, Docker, and Git to prepare data, train models, track experiments, and deploy solutions. I worked on fraud detection, customer classification, recommendation, and forecasting projects. I also created automated model training pipelines and monitored model performance after deployment. Before that, I worked at TechData from 2019 to 2021 as a Software Engineer developing Python applications and APIs. I graduated with a B.Tech in Computer Engineering in 2019 and completed a machine learning specialization. I enjoy combining software engineering with machine learning and solving practical problems with data. I am looking for a Machine Learning Engineer position where I can build and deploy scalable ML solutions.
