

Vikram Patel, phone 555-2108, email vikram.patel@email.com. I worked at DevCloud Systems from 2020 to 2025 as a DevOps Engineer where I designed and maintained CI/CD pipelines and cloud infrastructure. I worked with Azure DevOps, Git, Terraform, Docker, Kubernetes, Azure, PowerShell, and YAML pipelines. I automated application deployments, infrastructure provisioning, environment configuration, and operational tasks. I managed Azure resources, implemented monitoring and logging, configured access controls, and supported production releases. I also worked with Terraform modules and reusable pipeline templates to standardize deployments across development, test, and production environments. Before that, I worked at InfraTech from 2018 to 2020 as a System Administrator managing Linux and Windows servers. I graduated with a B.Tech in Computer Science in 2018. I enjoy automation, cloud infrastructure, and improving software delivery processes. I am looking for a DevOps Engineer or Cloud DevOps role where I can use Azure, Terraform, Kubernetes, and CI/CD skills.
